

**11:-** To compare AI-generated content with student-created content and understand limitations of AI.

- a) Write a 100–150 word paragraph on the topic:

“Will AI replace jobs or change them?” (This must be written by the student.)

- b) Ask any AI tool (ChatGPT/Gemini/Copilot) to write the same topic.

- c) In your practical copy, create a Comparison Table with the headings:

I. Human-Generated Content

II. AI-Generated Content

### **:- a) Student-Written Paragraph (Human-Generated)**

**Topic: Will AI replace jobs or change them?**

Artificial Intelligence will not completely replace jobs, but it will change the way people work. Many routine and repetitive tasks can be done faster by AI, such as data entry, basic customer support, and calculations. However, humans are still needed for creativity, decision-making, emotional understanding, and ethical judgment. New jobs will also be created, like AI trainers, data analysts, and cybersecurity experts. Workers will need to learn new skills to work alongside AI instead of competing with it. AI can help improve productivity and reduce workload, but it cannot fully replace human intelligence and responsibility. Therefore, AI will transform jobs rather than eliminate them completely, and people must adapt to these changes.

### **b) :- AI-Generated Paragraph**

*(Generated using an AI tool like ChatGPT)*

Artificial Intelligence is transforming the job market by automating tasks and improving efficiency across industries. While some jobs may disappear due to automation, many roles will evolve rather than vanish. AI will handle repetitive and time-consuming work, allowing humans to focus on creativity, problem-solving, and strategic thinking. New career opportunities will emerge in areas such as AI development, maintenance, and ethics. However

workers must upgrade their skills to stay relevant in an AI-driven world. Overall, AI is more likely to change jobs than replace them, reshaping the workforce and requiring continuous learning and adaptation from professionals.

### c) Comparison Table

Aspect	Human-Generated Content	AI-Generated Content
Writing style	Simple, personal, student-like	Formal and polished
Vocabulary	Basic and easy to understand	Advanced and professional
Original thinking	Based on student's understanding	Based on trained data
Emotional touch	More natural and personal	Neutral and general
Limitations	May have grammar issues	Lacks personal experience

#### Conclusion (Optional):

AI is helpful for ideas and structure, but student-created content shows originality and personal understanding, which AI cannot fully replace.

If you want, I can simplify it further or format it exactly as your teacher wants 😊
